Gentlemen,

I thought you might be interested to know that we have successfully intercepted a [redacted] test phone in real-time with our DCS 3000 system. The results are better than expected and we're ahead of schedule. [redacted] has not yet fully deployed the solution throughout their network, but it should not be too much longer.

RECORD 66F-HQ-A1247863

I was under the impression from [REDACTED] that DCS3000 itself does keep all data in an administratively accessed file used for debugging, including PCTDD even when the default of do not record is selected. I thought I understood [REDACTED] to say that that file is overwritten over time, but otherwise, if the do not record default remains unchanged, the PCTDD does not go to TA or anywhere else.

b6
b7c

[REDACTED]
Is this not correct?

When DSC 3000 is used for a FISA collection, doesn't the DCS 3000 pass all to the [] DSC 5000) including the PCTTD --in other words for FISAs the DCS3000 does NOT use the default of not recording the PCTTD???? I might have this incorrect, but I thought there were some differences.

Subject: RE: Post-Cut-Through-Dialed Digits

SECRET
RECORD 66F-HQ-A1247863

FYI.

Since OTD only acquires the information and passes it along, and since the determination on whether one set of PCTDDs is content and not addressing, routing, dialing or signaling can only be made at the field office or analyst level, there really is nothing technologically speaking that can be done to ensure that content determined PCTDD is not used for investigative purposes.

However, OTD and STLU is proposing to amend the FD 871 which is required to be signed to authorize tech agents to implement a criminal or FISA PR to add a selection box requesting that PCTDD be recorded. That box will have an asterisk which near the signature line will alert approval signatories that "If Post Cut Through Dialed Digit (PCTDD) recording is required, approving authorities are certifying that they have read and will ensure compliance with the DOJ Deputy Attorney General's policy directive of May 24, 2004 prohibiting any investigative use of PCTDDs that are determined to qualify as content of communications." In this way, there will at least be a record with a staff level supervisor, and ASAC acknowledging the DAG Directive each and every time they approve a pen register. In the absence of the box being checked, the DCS 3000 default of not recording PCTDDs will remain unchanged (although we still have the problem of non CALEA compliant provider networks were we cannot use the DCS 3000 and have to use older PR decoders that do not have the same ability to shut off recording of PCTDDs).

Please advise if you see any problems with this approach.

RECORD 66F-HQ-A1247863

IN RE [redacted]

Docket Number PR/TT 06-102

I just received a supplemental order from Judge Kotelly. The order is dated August 7.

Judge Kotelly has ordered the FBI to submit a report no later than September 25. This report must contain:

(1) an explanation of how the FBI is implementing its obligation to make no affirmative investigative use, through pen register authorization, of post-cut-through digits that do not constitute call dialing, routing, addressing or signaling information, except in a rare case in order to prevent an immediate danger of death, serious physical injury or harm to the National Security, addressing in particular: a) whether post-cut-through digits obtained via FISA pen register surveillance are uploaded into TA, Proton, IDW, EDMS, TED, or any other FBI system; and b) if so what procedures are in place to ensure that no affirmative investigative use is made of post-cut-through digits that do not constitute call dialing, routing, addressing or signaling information, including whether such procedures mandate that this information be deleted from the relevant system.

b6
b7C

(2) an explanation of what procedures are in place to ensure that the Court is notified, as required pursuant to the Court's Order in the above captioned matter, whenever the government decides to make affirmative investigative use of post-cut-through digits that do not constitute call dialing, routing, addressing or signaling information in order to prevent an immediate danger of death, serious physical injury, or harm to the national security.

[redacted]
You are in the building. Could you pick up copies of the order from me for STLU.

[redacted]
We are making our plans to move into our new Chicago Office in April of 2006. I have been working with [redacted] group) and they are supplying workstations for our Voice Box and [redacted] client terminals in our T-3 rooms. The "workstations" are basically a [redacted] wide work table with shelf for the VB or [redacted] client computer to sit on so an Agent or LS can sit and monitor the T-3 or FISA. They tell me that they have not planned to supply workstations for DCS3000 terminals. Every T-3 room in Chicago has two DCS3000 terminals for live pen monitoring and [redacted] information. Does your group have a facilities person or budget to supply workstations to support the DCS3000 terminals? Can you recommend someone from your group that would be the appropriate contact person for me?

b2

[redacted]
TICTU has some newly developed training to make available to the field TTA's. We can provide a copy to you guys at TPDU for review and comment. The following is requested to be sent out to the field for notification:

The Telecommunications Intercept and Collection Technology Unit is pleased to announce the release of a computer-based training course entitled, "Switch Based Intercepts using DCS 3000." This training focuses on an FBI software application used to conduct CALEA based intercepts. The course is designed for Technically-Trained Agents and covers the installation, configuration and use of the DCS 3000 suite of applications. The instructional material is provided on a CD and the entire course is designed to be completed in approximately four (4) hours.

To take advantage of this new resource, please contact [redacted] at (703) [redacted] or via a Trilogy e-mail.

Thanks.

Subject: RE: Cell Timing in DCS3000

b1
b6
b7C

(S) ~~SECRET~~
~~RECORD~~

[redacted] Almost every call is off by some degree.

Ex. Call on [redacted] or 21:57 shows up on toll records as 21:58:01 615 [redacted] calling our subject at 703- [redacted] on 1/15/05 (small difference)

Ex. on 12/10/2004 703 [redacted] 12:10 calls a A individual, on toll records the call is at 12:03:57 and last 1 min 35 secs

b2
b6
b7C
b7E

Plus around this time he calls his voice message system three times at 12:05:54, 12:03:34, 12:03:31 (his other cell). Luckily we know that the number has to be the call at 12:03:57 but what if its off, he's just leaving a message.

Ex. On 1/18/05 703 [redacted] calls 615 [redacted] at 15:48 and on toll records its at 15:49:08.

The problem is if I get a whole bunch of short calls Around the same time then I can't determine who is calling at that exact time. These are a few small examples, I will go through and find out some others and send them along when I see them.

TICTU Customer,

The TICTU has created a computer-based training course for TTAs and CMP technical staff. The course, entitled

~~SECRET~~

~~SECRET~~

Switch-Based Intercepts using DCS 3000, provides background information on the technology used to conduct CALEA based intercepts as well as basic information on how to use the DCS 3000 suite of applications.

TICTU needs your help! TICTU needs to conduct a beta test and review before releasing the course to the entire CMP community. To this end, we ask you to help us evaluate the training. If you agree, we will mail you a CD with the training course and instructions. All we ask is you review the material and fill of the evaluation form. TICTU would like to release this training to the field as soon as possible. If you can, please submit your evaluation form by Friday, July 21, 2006.

If you are unavailable to review this course, please let us know. Questions concerning this course review can be directed to [redacted] at (703) [redacted]

Thank you for your help ensuring that we produce a quality training product.

Thanks,

[redacted]

DCS-3000 is not an interim solution. It acted as an interim T-III solution until a couple of years ago. Today, the DCS-3000 is the FBI's primary CALEA pen-register collection system.

[REDACTED]
[REDACTED]
If we're authorized in the future to deliver target-specific data to the van, then it would probably make the most sense to deliver all the information; visa-vis, a DCS-3000 Client in the van. This way your vendor will not have to bother trying to interpret the many variations of CALEA pen-register data (which means less development cost and time for your group), and the van teams will have all the available call information in a format consistent with the CMP system.

I'm not sure what type of information you need from the DCS-3000 other than [redacted]. We plan to deliver this information in NEMA format to your interface. I do remember some cursory discussion along the lines of pen-register data being transmitted to the van, but I'm not so sure the FBI's security experts will buy off on this idea since transmitting this information over a [redacted]. If you plan to have the pen-register data transmitted to the van, we can assist you. The best place to get a look at what's available (field descriptions) is in the [redacted]. This is the current spec for all things CALEA. If you want to see the DCS-3000 interpret CALEA data, just drop by the lab.

Hi guys,

We upgraded our machines. We really like the changes. It's funny how the smallest things can make your day. We like that all the features are visible, ie [redacted] etc., on the window used for entering the target information. We also like the change from [redacted] to the standard court order terminology of [redacted] (It would be nice if [redacted] could also be changed to the standard court order terminology of [redacted]) We were a bit disappointed that we still cannot concatenate the [redacted] files. We really LOVE the concatenate feature. As you know, we have dropped the [redacted] and have been using the concatenate feature to upload our CDNRS files for about two weeks now. It is awesome! Please thank all at TICTU for their tremendous work.

[redacted]
I will forward the below info. to the Tel Apps people and see if they can get it corrected.

Thanks,

TTAs [redacted]

[redacted]
Let me repeat what I've said in the past - I get more out of these TICTU conferences than any other conference/in-service I go to. Having said that, I would be interested in a little more in-depth look at [redacted] DCS-3000, as well as [redacted] capability of the DCS-3000. Also, I am lead to believe that [redacted] has a new "CALEA" solution for land lines with a simple to install device. I would like more on this.

In the first half of 2005 the Telecommunications Intercept and Collection Technology Unit (TICTU) plans to once again host two regional conferences. These forums will provide specialized training to field office practitioners responsible for telephone ELSUR operations and foster cooperation between the FBI and the nation's telecommunications industry.

TICTU is currently developing the agenda for these conferences and requests your suggestions for agenda topics and carriers of particular interest. We need your input as soon as possible so that we can set a tentative agenda. You may send your ideas to me via email or contact [redacted] at 703 [redacted]

[redacted]
Happy New Year. Regarding [redacted] e-mail for topics:

1. Policy procedure for storage and maintaining of collected information from the DCS 3000. What is our requirement for maintaining the log, sum and cdnr files? Do we need a printed copy? Is it evidence? It would be nice if all the divisions/plants were on the same page regarding this topic. It may be more of a [redacted] issue. I realize this is not a carrier issue, but rather an FBI issue. I am not sure this is the forum for such a topic.

2. What are the chances of having incoming, FOREIGN calls identified as such (or even outbound).

3. Any continued development in the [redacted] area is a good thing.

Thanks.

This email is to request an ITAR number(s) for the Telecommunications Intercept and Collection Technology Unit (TICTU) training seminars being held in San Diego, CA on April 12-13, 2006 and in Denver, CO on June 13-14, 2006.

Details: The TICTU will conduct two identical two-day seminars on switch-based intercept concepts and methods. The seminars are designed for Technically-Trained Agents (TTAs) and support

~~SECRET~~

~~SECRET~~

personnel who routinely use collection equipment supported by TICTU. The seminars will provide training on new DCS-3000 features and updates on many issues related to switch-based electronic surveillance. Additionally, the participants will acquire a current overview of the Communications Assistance for Law Enforcement Act (CALEA) compliant solutions that telecommunication carriers use, and an updated description of the techniques developed by TICTU to provide intercept capabilities for these carriers' solutions.

Two representatives from each of the following offices are being invited to attend the seminars:

San Diego, CA - April 12-13, 2006

Albuquerque, Anchorage, Birmingham, Buffalo, Chicago, Columbia, Dallas, Jackson, Jacksonville, Kansas City, Little Rock, Los Angeles, Louisville, Minneapolis, Mobile, New Haven, New Orleans, Oklahoma City, Omaha, Phoenix, Pittsburgh, Richmond, Sacramento, San Diego, San Juan, Seattle, Springfield, and WFO.

Denver, CO - June 13 - 14, 2006

Albany, Atlanta, Baltimore, Boston, Charlotte, Cincinnati, Cleveland, Denver, Detroit, El Paso, Honolulu, Houston, Indianapolis, Knoxville, Las Vegas, Memphis, Miami, Milwaukee, Newark, New York, Norfolk, Philadelphia, Portland, St. Louis, Salt Lake City, San Antonio, Tampa, San Francisco.

Please let me know if you need any additional information.

Thank you,

~~SECRET~~
RECORD 268-HQ-1045581

[redacted]

I need to speak to you about the CI-100 that interfaces the DCS-5000 to the DCS-3000. This system was originally accredited as a part of the DCS-3000. During the DCS-3000 re-accreditation kickoff meeting last week, it was identified that the CI-100 was Type Accredited as a "Secret" system and therefore cannot reside within the boundary of the DCS-3000, as it is a SBU system. What this means for DCS-5000 is that we will need to expand the DCS-5000 boundary to include the CI-100. I need to discuss this with your management to determine if this will have a major impact on your operations. I don't believe it will as CI-100 is managed by the same group within OTD. If possible I would like to meet with you and whoever you deem necessary to discuss this, preferably tomorrow 11am or Wednesday 1pm.

~~SECRET~~
RECORD 268-HQ-1045581

b2
b6
b7C
b7E

Gentlemen,

We are nearing a decision point on PAM Module implementation. Thus far the system vendor has told us that PAM implementation will require extensive research to ensure that it will not cause system malfunctions. This testing cannot take place until after the PAM module has been identified and the current security baseline has been fielded; due to ongoing work and scheduled system upgrades.

In addition, there is some question as to what the Requirement is for this item. Identifying a PAM module that works well with NIS+ is proving difficult. I recollect a conversation with the Security Division test team. In this conversation it was agreed that finding PAM modules that work as advertised (providing greater security without causing increased system outages) were difficult to find. In addition, I was left with the feeling that this was a normal finding for Solaris based systems and thus would be waived. It was agreed that this was not a DCS-5000 system problem, but a much broader problem occurring on most [redacted] platforms. Perhaps I misunderstood what was said. This brings me to my question:

~~SECRET~~

~~SECRET~~

you with same.

I've been notified that each of you is an ISSO for a particular system (or systems) as shown below:

ChemNet [redacted]
DCS3000 [redacted]
FAVIAU LAN [redacted]
OPDC LAN [redacted]
VICAP [redacted] (Web)
DCFS [redacted]
DCS5000 [redacted]
DCS Net [redacted]
IPGNet [redacted]
TTAP Net [redacted]
CI Net [redacted]

b6
b7C

In the interim and by COB, 25 May, here's what's needed to get prepared for the upcoming inspection via this self-assessment evolution:

> If a system approval-to-operate (ATO) will be greater than a year old as of June 2006, then:

(1) It must be scheduled for a Found Stone scan by an ESOC representative. Note: At his direction, I will tell your Acting Quantico Complex Information Systems Security Manager (ISSM) [redacted] if a scan is needed so [redacted] can coordinate same with all parties.

(2) The SSP must be reviewed and changed, if necessary, for currency, and that review and any changes documented on the SSP "Record of Changes and Review" page.

(3) The system contingency and incident response plans must also be reviewed and changed, if necessary, for currency, and those reviews and any changes documented on the SSP "Record of Changes and Review" page.

I've given all of you a call already on this, and for those of you I couldn't talk with at the time, I left vmail messages with requests for return calls. I've also worked with several of you in past years on the systems shown above (or others), but I'd still like to come by and talk with you on this effort sometime between now and COB on the 23th. Again, for those of you I haven't talked with already, would you please give me a holler as soon as you can so we can schedule a date and time for our meeting? I look forward to hearing from you very soon.

Thank you very much ahead of time for your assistance and interest in this.

:) [redacted]

P.S. If you'd like to call me rather than send an email message, my work phone's 703 [redacted] and my Blackberry number's 202 [redacted]. If I don't answer your call right away, would you please leave a message so I can get back with you immediately? Time is of the essence.

P.P.S. In a few instances, [redacted] may come by to talk with you instead of me. Thank you again.

JWS

TICTU Customer,

The TICTU has created a computer-based training course for TTAs and CMP technical staff. The course, entitled Switch-Based Intercepts using DCS 3000, provides background information on the technology used to conduct CALEA based intercepts as well as basic information on how to use the DCS 3000 suite of applications.

TICTU needs your help! TICTU needs to conduct a beta test and review before releasing the course to the entire CMP community. To this end, we ask you to help us evaluate the training. If you agree, we will mail you a CD with the

~~SECRET~~

~~SECRET~~

training course and instructions. All we ask is you review the material and fill of the evaluation form. TICTU would like to release this training to the field as soon as possible. If you can, please submit your evaluation form by Friday, July 21, 2006.

If you are unavailable to review this course, please let us know. Questions concerning this course review can be directed to [redacted] at (703) [redacted]

Thank you for your help ensuring that we produce a quality training product.

Thanks,

[REDACTED] it looks like our TIII is proceeding, activation date three to four weeks out??? I have attached a letter that I will be faxing to [REDACTED] requesting a test phone be provisioned so that we could test equipment and train monitors. We are looking at August 11, 2004 as the training day. Does DCS3000 need to be provisioned? Thanks [REDACTED]

Hi [REDACTED]
Wanted to run this question past you and see if you could provide us some insight to this problem. We have several pens up thru [REDACTED] authorized for [REDACTED] which are coming back with the message [REDACTED] when [REDACTED] is used. I compared [REDACTED] (which is what the DCS3000 shows in the [REDACTED] field) with the data base one of the [REDACTED] echs sent me and don't even see [REDACTED] in that format. He shows them as just one to three digit numbers (no alpha numerics or hexadecimal) and then provides a [REDACTED] that corresponds to the [REDACTED]. I suspect the database I have from [REDACTED] may be different (unless I'm reading something wrong in the DCS3000) than the one you guys have for the [REDACTED] database, since at least one other alpha numeric [REDACTED] I can see in the DCS3000 for the [REDACTED] targets are in the format [REDACTED] which all bring up a [REDACTED]. The case agent's asking why the calls with [REDACTED]. Any suggestions on what we need to do on this end to resolve the error [REDACTED]? Could it be a bad entry in our database back there or do I need to be talking to [REDACTED]? I have spoken to [REDACTED] data in the past and no one seemed to have many answers, do you guys have any better contacts for [REDACTED] regarding [REDACTED] that I could talk with? Any suggestions you could make would be appreciated. Also, if I need to be talking to someone other than you about this please feel free to redirect me. Thanks [REDACTED]

Gentlemen,

I checked all 56 field office's criminal pen-register DCS-3000 systems for post cut through dialed digit information. The attached spreadsheet list the field office and the observed data for the office. Rather than counting all targets with and without the dialed digit extraction option set I categorized the data as All, Most, Some, Few, and None. All means all targets in the system are currently set to collect post cut through digits. A ranking of Few means the majority of the targets are set with the option turned off. For example, WFO was ranked Few because only [REDACTED] current targets were set to collect post cut through digits.

A summary of the results:

Field offices with All targets set: [REDACTED]
Field offices with Most targets set: [REDACTED]
Field offices with Some targets set: [REDACTED]
Field offices with Few targets set: [REDACTED]
Field offices with No targets set: [REDACTED]

[redacted] please forward to all TS/TA's for a response.

Ladies and Gentlemen,

Can everyone please send me a very short reponse on the practice your offices follows in the use of the DCS-3000. Do you ONLY capture the first string of numbers or do you use the toogle to capture ALL numbers.

Since there are many options available to us on how much dialed information we collect we need to know what the norm is around the country. I understand that some of you will answer it is on a "case to case" basis, but I am just looking for the norm in your office.

Thanks for your quick response. The legal guys need this information to talk to all the options the DCS-3000 allows.

VOICEBOX. All Field Offices and a number of RA's have increased their abilities in Title III intercept collections by the implementation of digital, computer based collection platforms. During this time telecommunication intercepts have migrated from tape based audio recordings with manual cataloging of related data and documents to a Microsoft Windows based system that enables the audio, data and documents to be captured together and stored within a relational database. This configuration allows for easy retrieval and analysis of the information which enhances the ability of case agents to perform their duties efficiently and effectively. The DCS-6000 program has also been able to accommodate many smaller RAs and joint task force

~~SECRET~~

operations with a portable collection systems. With this portable system the RAs are able to move the collection and monitoring of the T-III operations to a facility that can better suit their needs. The usability of VoiceBox is applauded by the personnel using it throughout the organization. Since 2001, 68 systems have been deployed to the field.

b2
b7E

ONE WAY PUSH. Prior to the development of the One Way Push system, vital CALEA data could not be imported directly from the DCS-3000 systems into [] due to the security constraints of the DCS-3000. Consequently, [] was not fully CALEA capable. The One Way Push meets security challenges head-on through an architecture that employs a "low" and "high" side server, connected by a one-way serial connection. When installed, the One Way Push allows for the full integration of CALEA data into the [] exponentially increasing its capability.

WORK FLOW MANAGER. Work Flow Manager is capable of providing critical management information to Language Services personnel and case managers throughout the FISA collection community. Work Flow Manager implements the ability to monitor and provide reporting for all audio sessions received, transferred, transcribed, and stored. Additional effort is being applied to Work Flow Manager in order to satisfy Language Services requirements for enhanced statistics and information reporting.

[REDACTED]
Thanks for your help last week on our kidnapping matter (305B matter). It was resolved in the best possible fashion. Subject arrested and child returned to her parents.

By way of background (for [REDACTED]) the Mobile FBI office was requested by the Mobile Police Department (MPD) to assist them in tracking and locating a [REDACTED] year old male subject who had [REDACTED] year old female over the internet to meet him [REDACTED]. The girl met the subject willingly and had been missing for ten days before the FBI was called. The MPD became concerned about the safety for the child after conducting search warrants and interviewing the subject who refused a polygraph. These concerns were compounded when a [REDACTED] surmised that the subject would when caught kill the child and himself rather than face prosecution.

FBI-Mobile became involved in this matter Thursday night and obtained tracking orders for the girls cell phone and the target's on Friday morning. Pen registers were initiated and Mobile TTAs began working with the cellular providers to attempt to locate the phones so mobile tracking equipment could be deployed.

A request was made by Mobile TTAs for help from [REDACTED] regarding the [REDACTED] program on the DCS 3000 system. [REDACTED] your assistance in remotely loading this program, your patience in showing us how to use it and your dedication for staying well after what I am sure was the end of your workday is much appreciated. This program allowed us to follow the target as he traveled thru three states (Alabama, Mississippi and Louisiana) and allowed us to accurately predict where the target was headed so that local authorities could conduct a thorough search for the target vehicle.

At 2:00 am the target's vehicle was located outside a hotel in Slidell, Louisiana. While FBI personnel were responding, the target somehow became alerted to law enforcement presence and attempted suicide by cutting his wrist. Medical assistance was obtained by the locals for the target and he was arrested. The young girl was recovered without any further harm. The target was arrested on charges [REDACTED] (the girl was younger than the legal age of consent), [REDACTED] and will most likely face federal charges involving the internet.

Thanks again for your assistance, patience and long hours that you worked on Friday evening. Your assistance was most helpful to us and allowed for the best possible resolution of this matter....

[redacted]
Hey. How are things?
I was talking to [redacted] today and she told me they were given a pen register request [redacted]

A couple of questions -
Do you have any recommendations for [redacted]
Do you know if/how other offices have handled this?

I noticed you don't have a contact for [redacted] in the TICTU website and was not sure if you had one. This is the number that [redacted] called: 732- [redacted] and spoke to [redacted] (the spelling might be off). I hope this might help you.

DCS question -

I looked through the manuals for the DCS 3000 and could not find anything for the [redacted] client. I am sure you have shown me in the past how to use it but I can't figure out how to put the number in the [redacted] client. Can you give me some instruction on this? You can email it to me or if you want you can call and leave me a message 202- [redacted]

~~SECRET~~

Thank you
Dan

Hey guys -

This is just a quick note to let you know they are doing more power interruptions at WFO this month.

12/14/05 which will be our 4th floor (which should not affect the DCS at all)
12/20/05 which will be our 3rd floor. (This will affect the DCS 3000). This will include the DCS and all of our modems and routers in the Criminal Plant area. We will be powering down the DCS 3000 between 5pm and 5:30 pm. And hopefully it will be back up before 10pm.

If you need anything from us, or can give me any helpful advice, I would appreciate it.

Thank you,
Supervisory Telecommunications Specialist

Subject: Re: Fwd: West Coast Regional Conference

Hi,

Thanks I already was notified of the conference and they know that I am attending. I have already gotten calls and emails from most of the carriers that I talk to everyday to ask if I would be there as we are planning where we are having dinner each night. It is always about FOOD.

They (ERF) have asked me to be a presenter at the conference on a case the shows the merits of the DCS3000 and how it helped to solve a major case. It is really [REDACTED] who should get all the credit as they do all the work and make this all come together. One of the biggest cases that I worked on that brought a great media attention agents were given

b6
b7C

[REDACTED] I actually forgot about this case, actually it was [REDACTED] who reminded me about the [REDACTED] case. After all the long hours that I put in, I guess I blocked it all out :)

I mentioned to SAC Gurley that I was asked to be a presenter and what case it was that I was going to present and he thought that it was a great personal compliment for me but more so that the LAFO was chosen to discuss one of their cases and was pleased to see that the LA division would be recognized at the conference and it would get noticed at HQ. I mentioned that I thought that Rich Garcia was here at the time and SAC Gurley said that ADIC Garcia would be extremely pleased. [REDACTED] will be at the conference so that will be great. I think that I even have all the newspaper clippings from the case.

Well the conference should be interesting and I have not been to San Francisco in a long time so I am looking forward to it. I will bring back

[REDACTED]
FYI - From what I have been hearing from the field, there seems to be a growing trend that some JTTFs are purchasing their own VOICEBOX collection platforms, with or without DCS-3000 connectivity, and are looking to the FBI for assistance in maintaining these systems. One would think that a maintenance contract would have been purchased at the same time, but with limited state and local monies, I tend to doubt that. I believe now would be a good time for TICTU to begin discussions among ourselves as to how ITD would want to respond to the field in the event TTAs are committed to assist in this kind of situation.

Marcus Thomas has asked that we determine the cost of the IT portions of the OTD collection systems listed on the OCIO master list of systems, applications, databases, and networks. For the systems/projects listed below, please determine or estimate as best you can the cost of the hardware, software, and the development work for the interface to the Trilogi network or other FBI IT infrastructure. This will help us separate the funding of National Security Systems that are not truly IT from IT systems, databases, applications and networks. Please provide an estimate by Friday 3/24.
